

# Update

May 2020

## 699 records

Thank you to all the collaborators from the **58 units** that have signed up, for this incredible exponential response.

## First publication! Please enter your data

The steering group are making preparations for the first manuscript which will include patients discussed in MDT between 16/3/20 to 8/5/20. Please upload your data ASAP to be a collaborator on this first output.

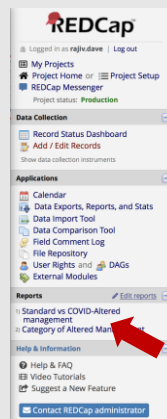

In order to get an accurate picture of the impact of COVID-19 on breast cancer management, it is vital we get an accurate % of 'altered' management. Therefore, please include the patients having standard management – which serves as the comparative denominator.

## Tell your colleagues!

We would encourage as many breast units as possible to sign up, to gather representative national data. Please direct your friends and colleagues to <http://bmapc.com/>

## Top tip!

To track the impact of COVID-19 in your unit, use the reports tab, which has two charts available with live data reports. This may be useful for service planning going forward.

The 'Breast Cancer Management Pathways during the COVID19 pandemic' audit is endorsed by the Association of Breast Surgeons
